INTERNATIONAL

TRANSFORMING ORGANIZATIONS
SINCE 1987

Agile Overview.

Your IT staff's success—is our obsession.

Agile methods or Agile processes generally promote a disciplined project management process that encourages frequent inspection and adaptation, a leadership philosophy that encourages teamwork, self-organization and accountability, a set of engineering best practices intended to allow for rapid delivery of high-quality software, and a business approach that aligns development with customer needs and company goals. Agile development refers to any development process that is aligned with the concepts of the Agile Manifesto.

Benefits of Agile Training

Agile training can shorten the learning curve to achieve faster ROI. The sooner products get to market the sooner clients' see the benefits from improved, frequent releases. Agile training can get development moving early so a functional 'ready to market' product begins to emerge after a few iterations.

Commonality of message, concepts, implementation tactics, language and perspective, is best obtained by project teams attending the same training, in the same class, at the same time if at all possible.

About the Trainer.

Suresh GP is Teledec's VP of Information Technology. He has more than 16 Years of IT experience and a wealth of experience in different facets of IT Service Management, IT Governance, Business Relationship Management, Agile, DevOps. Over the years, he has performed diversified roles that included ITSM Consultant/ Solution Architect/ Program Manager/Business Consultant, Architecture & Standards Governance Manager.

With ideal blend of experience in Infrastructure Management domain and Managed Services, he continues to be a trusted advisor for Clients World Wide. To complement his extensive experience, he has earned wide range of certifications that include ITIL V3 Expert, CGEIT, Business Relationship Management Professional, PMP, DevOps Foundation, Certified Agile Service Manager, ISO 20000 Practitioner and ISO/IEC 20000 & 27001 Lead Auditor. AGILE SERVICE MANAGER AND PROCESS OWNER CERTIFICATION

Agile Service Manager Certification

This course provides an introduction to Agile Service Management, the application, and integration of agile thinking into service management processes and process design projects. Agile thinking improves IT's effectiveness and efficiency, and enables IT to continue to deliver value in the face of changing requirements.

Learning Objectives.

Leadership, teamwork, self-organization, and accountability.

The learning objectives for Certified Agile Service Manager (CASM) include an understanding of:

- What it means to “be Agile”
- The Agile Manifesto, it's core values and principles
- Agile concepts and practices including ITSM, Kanban, Lean and DevOps
- Scrum roles, artifacts and events as it applies to both products and processes
- The two aspects of Agile Service Management
- Agile Process Improvement — ensuring processes are lean and deliver “just enough” control
- Agile Process Design — applying Agile practices to process design projects

Target Audience

Agile Service Manager certification program provides excellent ROI and is ideally suited for:

- Anyone interested in learning about Agile and Scrum from a products and process perspective
- Employees and managers responsible for designing, reengineering or improving process
- Consultants, internal and external suppliers, Process stakeholders

Certification

Successfully passing (65%) the 60 minute exam, consisting of 40 multiple-choice questions, leads to the designation as a Certified Agile Service Manager. The certification is governed and maintained by the DevOps Institute; exams are delivered through an independent, global examination partner.

Agile Process Owner Certification

This course describes process owner responsibilities and provides the education needed to oversee the design, reengineering, and improvement of IT Service Management (ITSM) processes; particularly in the context of Agile Service Management. Participants learn how to use Agile and Lean principles and practices to put in place ‘just enough’ process and how to continually align process performance with overall business goals.

Learning Objectives.

Design, redesign, and improve ITSM processes.

- Agile and Agile Service Management concepts
- Process owner role and responsibilities
- Managing and prioritizing a process backlog
- Creating and utilizing user stories
- Collaborating with process stakeholders and other process owners
- Overseeing Agile design/improvement activities
- Managing organizational change activities
- Monitoring and measuring process performance
- Process reviews and improvements

Target Audience

The target audience for this course is:

- Process owners and managers
- Employees/managers responsible for designing, reengineering or improving processes
- Process improvement consultants
- Anyone responsible for managing process requirements, ensuring the efficiency and effectiveness or maximizing the value of processes

Certification

Successfully passing (65%) the 60 minute exam, consisting of 40 multiple-choice questions, leads to the designation as a Certified Agile Process Owner. The certification is governed and maintained by the DevOps Institute; exams are delivered through an independent, global examination partner.
